Product Innovation

More design freedom and
more cost efficient free space

Rolflex Nederland BV was established in 1978 and specialised in the assembly of roller shutters, sectional doors, dock shelters and loading bay systems. We developed the Compact Door to meet the changing requirements of designers and building owners.

We manufacture the Compact Door to the highest standards in our automated production facility at Ulf in The Netherlands. Our approved dealers are offered installation and product training at our Compact Academy. We also invite all our customers to visit us and meet our dedicated team of experts.

Compact

FOLDING DOOR

Design Freedom

The Compact Door is different from other industrial doors because of its unique patented folding system. On opening the door folds upwards within the side tracks above the door space. The smooth and quiet movement uses little energy. This guarantees a long life cycle and the minimum of maintenance.

Just click on to www.rolflex.com

Design your own door to your specification.
Technical details in your mailbox within minutes!

The Compact Door provides more usable space for services, loading bays, crane gantries and vehicle maintenance equipment.
